

# CARE & CLEANING OF YOUR NEW MAGNETS

- \*Only apply magnets to clean, dry, flat surfaces. Applying over dirt, moldings or body lines will inhibit magnetic hold and allow flowing air behind.
- \*Remove frequently to clean the vehicle surface and both sides of the magnet. Dry thoroughly with a clean cloth and allow to air dry completely.
- \*When cleaning, use a non-abrasive solution suitable for high quality painted finishes, free of strong solvents and alcohol.
- \*Be sure all paints (90 days), clear coats (60 days) and waxes (2 days) are cured before applying. (Check manufacturers specs for adequate times.)
- \*Avoid prolonged exposure to harsh chemicals; gasoline, motor oil, antifreeze, etc.
- \*Protective coatings and waxes are not recommended.
- \*Never pull the magnet to prevent scratching of vehicle surface.
- \*Store completely flat. The magnet is soft and will take the shape of how it is stored. Warmth may help to remove wrinkles.

***Purchase a protective magnet case for \$5***
